Hardware Kit

Contents		QTY	Torque Requirements
a	M10 x 50mm Hex Head Bolts	2	38 ft lbs
b	M10 x 45mm Hex Head Bolts	4	38 ft lbs
c	M10 Nylock Nuts	6	-
d	M10 Flat Washers	12	-

Tools Needed for Assembly

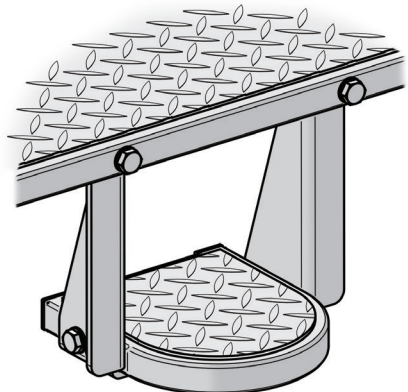

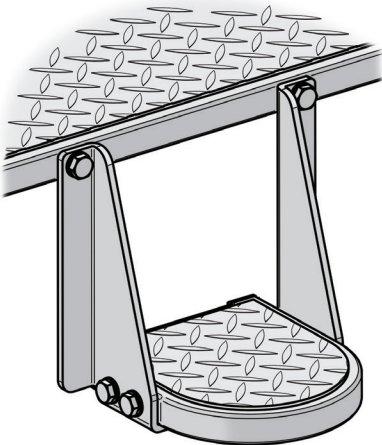

- Sockets and Open Ended Wrenches (17mm)
- Drill and Drill Bit (13/32")
- Marking Device
- Small Round File
- Safety Glasses

Step Plate Assembly

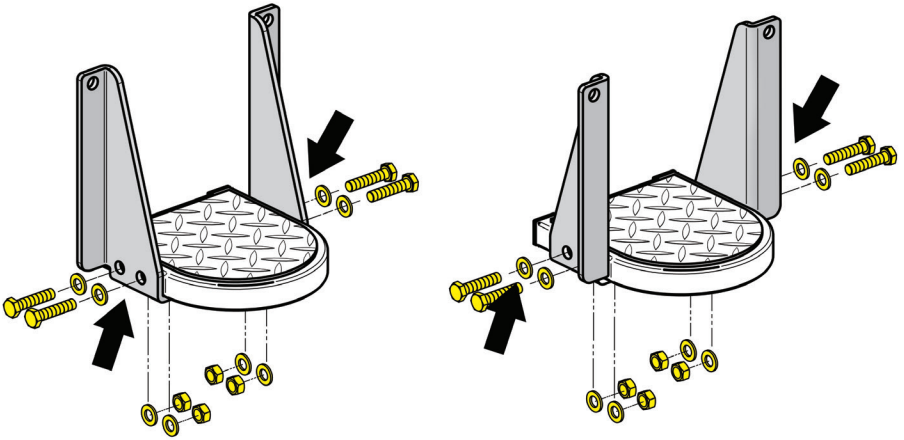

1. Locate an area on the rear of the foot plate to mount the step plate assembly. The area should be free and clear of other accessories (i.e. rear hitch).

NOTE: If a safety grab bar is installed, the step plate should be mounted to the right or left of the grab bar so the user can hold the grab bar for support when entering and exiting the cart.

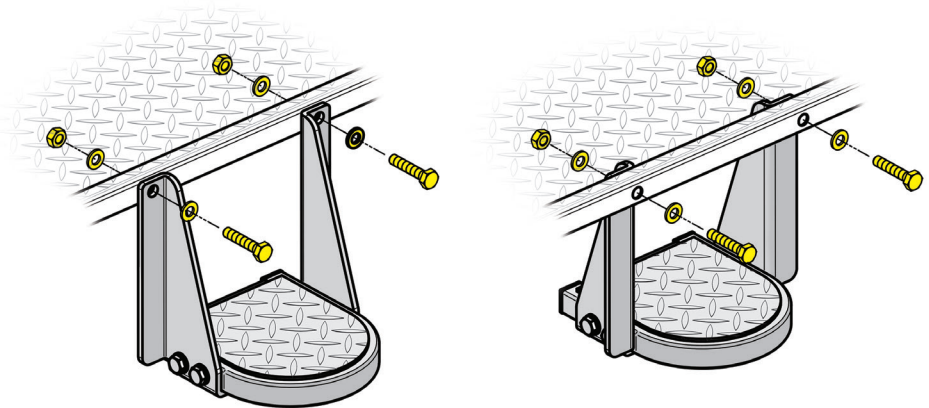

2. The step plate assembly can be mounted to the footplate in two ways. Select the preferred orientation.

3. Fasten the mounting brackets to the step plate in the preferred orientation using (4) M10 x 45mm Hex Head Bolts, (8) Flat Washers and (4) Nylock Nuts. Tighten until snug but do not fully tighten.

4. Using the holes on the step plate mounting brackets as a guide, mark the hole locations onto the footplate's edge with a marking device. The center of the hole locations should fall over the center of the metal frame in the footplate.
5. Using the marked hole locations as a guide, drill a 13/32" thru-hole at the (2) marked locations. File any rough edges.
6. Fasten the step plate assembly to the footplate using (2) M10 x 50 Hex Head Bolts, (4) Flat Washers and (2) Nylock Nuts. Hand tighten.

7. Hand tighten any loose hardware.

RUGGED STARTS HERE

This completes the installation of your RHOX Rear Step Kit.
